PLANNING AND CONTROL USING
MICROSOFT® PROJECT 2013, 2016 or 2019
&PMBOK® GUIDE SIXTH EDITION

BY
PAUL EASTWOOD HARRIS
SUMMARY
The book was written so it may be used as:

- A training manual for a two-day training course, or
- A self-teach book, or

The book has been written to be used as the basis of a two-day training course and includes exercises for the students to complete at the end of each chapter. Unlike many training publications, this course book may then be used by the students as a reference book.

This publication is ideal for people who would like to quickly gain an understanding of how the software operates and how the software differs from Oracle Primavera Project Manager, P3, SureTrak and Asta Powerproject thus making it ideal for people who wish to convert from these products.

CUSTOMIZATION FOR TRAINING COURSES
Training organizations or companies that wish to conduct their own training may have the book tailored to suit their requirements. This may be achieved by removing, reordering or adding content to the book and by writing their own exercises. This book is available in both A4 spiral bound, which lies flat on the desk for training and/or self-teaching, and in B5 paperback as a reference manual. Please contact the author to discuss this service.

AUTHOR’S COMMENT
As a professional project planner and scheduler I have used a number of planning and scheduling software packages for the management of a range of project types and sizes.

The first books I published were user guides/training manuals for Primavera SureTrak and P3 users. These were well received by professional project managers and schedulers, so I decided to turn my attention to Microsoft Project 2000, 2002, 2003, 2007, 2010, 2013, 2016 and now Microsoft Office Project 2019. This book follows the same proven layout of my previous books. I trust this book will assist you in understanding how to use Microsoft Project on your projects. Please contact me if you have any comments on this book.

SPECIAL THANKS
I would like to thank:

- Martin Vaughn for reviewing my draft book and making valuable comments that I have used to improve the quality of this publication.
- Liam Harris for his assistance in updating this text from Microsoft Project 2010 to Microsoft Project 2013.
- Jesica Yabo for her assistance in editing and preparing the final version of earlier books.
- Thomas Grant for his valuable proof reading the book.
- My wife Sue Harris for her support.

### 3 NAVIGATION AND SETTING THE OPTIONS MICROSOFT PROJECT

- **3.1** Starting Microsoft Project Professional and Standard (39)
- **3.2** Identify the Parts of the Project Screen (41)
- **3.3** Customizing the Screen (42)
  - 3.3.1 Ribbon Toolbar (42)
  - 3.3.2 Quick Access Toolbar (43)
  - 3.3.3 Exporting and Importing Toolbars (44)
- **3.4** Microsoft Project Windows (45)
  - 3.4.1 Understanding Windows in Microsoft Project (45)
  - 3.4.2 Creating a New Window (45)
  - 3.4.3 Managing Windows (45)
  - 3.4.4 Resizing Windows (46)
  - 3.4.5 Splitting Views (46)
  - 3.4.6 Managing Details Forms (47)
- **3.5** Status Bar (47)
- **3.6** Forms Available from the Ribbon Groups (48)
- **3.7** Right-clicking with the Mouse (48)
- **3.8** Finding the Task Bars in the Gantt Chart (48)
- **3.9** Setting up the Options (48)
  - 3.9.1 General Tab (49)
  - 3.9.2 Schedule Tab – Scheduling options for this project: (50)
  - 3.9.3 Schedule Tab – Advanced Options (51)
- **3.10** Mouse Pointers (52)
- **3.11** Select All Button (52)
- **3.12** Short Cut Keys (53)
- **3.13** Help and Tell me what to do (53)
- **3.14** Workshop 1 – Navigation and Setting Your Project Options (55)

### 4 CREATING PROJECTS AND TEMPLATES

- **4.1** Starting Microsoft Project (61)
- **4.2** Creating a Blank Project (61)
- **4.3** Opening an Existing Project (63)
- **4.4** Re-opening a Project (63)
- **4.5** Creating a Project Template (64)
  - 4.5.1 Setting the Personal Template Directory (64)
  - 4.5.2 Creating a Personal Template (65)
- **4.6** Creating a New Project from a Template (66)
- **4.7** PMBOK® Guide File Naming Convention (67)
- **4.8** Saving Additional Project Information (67)
- **4.9** Using the Alt Key and Keystrokes to Access Commands (68)
- **4.10** Saving a Project (68)
- **4.11** Closing Microsoft Project (68)
- **4.12** Workshop 2 - Creating a Project (69)

### 5 DEFINING CALENDARS

- **5.1** Understanding Calendars (73)
- **5.2** Calendars and the PMBOK® Guide (74)
- **5.3** Editing Calendars (74)
  - 5.3.1 Editing Working Days to Create Holidays (74)
  - 5.3.2 Editing a Calendar to Create an Exception (76)
- **5.4** Creating a New Calendar (77)
- **5.5** Assigning a Calendar to a Project (77)
- **5.6** Calculation of Tasks in Days (78)
- **5.7** Effect on 2007 Calendars When Saving to 2000 – 2003 (79)
5.8 Selecting Dates 79
5.9 Renaming, Deleting and Copying Calendars Using Organizer 80
5.10 Workshop 3 - Maintaining the Calendars 81

6 ADDING TASKS 83
6.1 Understanding Tasks 83
6.2 Adding New Tasks 84
   6.2.1 Adding a Task Under an Existing Task 84
   6.2.2 Inserting a Task Between Existing Tasks 85
6.3 Understanding Change Highlight 85
6.4 Copying and Pasting Tasks 85
6.5 Copying Tasks from Other Programs 86
6.6 Milestones 88
6.7 Reordering Tasks by Dragging 88
6.8 Sorting Tasks 89
6.9 Task Information Form 89
6.10 Elapsed Durations 91
6.11 Indicators Column 91
6.12 Assigning Calendars to Tasks 91
   6.12.1 Assigning a Calendar Using the Task Information Form 91
   6.12.2 Assigning a Calendar Using a Column 92
6.13 Workshop 4 - Adding Tasks 93

7 ORGANIZING TASKS USING OUTLINING 95
7.1 Understanding Outlining 95
7.2 Creating an Outline 95
7.3 Promoting and Demoting Tasks 96
7.4 Summary Task Duration Calculation 97
7.5 Summarizing Tasks 97
   7.5.1 Summarize and Expand Summary Tasks to Show and Hide Subtasks 97
   7.5.2 Roll Up All Tasks to an Outline Level 98
7.6 Project Summary Task 98
7.7 Workshop 5 - Entering Summary Tasks 99

8 FORMATTING THE DISPLAY 101
8.1 Formatting the Columns 102
   8.1.1 Understanding Custom Fields 102
   8.1.2 Column Names 102
   8.1.3 Inserting Columns 102
   8.1.4 Format Columns Group 103
   8.1.5 Hiding Columns 103
   8.1.6 Adjusting the Width of Columns 104
   8.1.7 Moving Columns 104
   8.1.8 Formatting Columns Using the Table Function 104
8.2 Formatting Time Units 106
8.3 Formatting the Bars 107
   8.3.1 Formatting All Task Bars Using the Bar Styles Form 107
   8.3.2 Format Bar Styles Group Menu 109
   8.3.3 Gantt Chart Styles Group Menu 110
   8.3.4 Formatting Bars Using the Gantt Chart Wizard 110
   8.3.5 Placing Dates and Names on Bars 110
8.4 Row Height 111
   8.4.1 Setting Row Heights 111
   8.4.2 Wrap Text Command 111

This publication is only sold as a bound book, no parts may be reproduced by any means, e.g. electronic, video or print.

16.4.7 Reschedule Uncompleted Work To Start After 231
16.4.8 Updating Tasks Using Task, Schedule Functions 233
16.4.9 Reschedule Work Function 233
16.4.10 Updating Milestones Issues 234
16.4.11 Physical % Complete 234
16.5 Simple Procedure for Updating a Schedule 235
16.6 Procedure for Detailed Updating 235
16.7 Comparing Progress with Baseline 237
16.8 In-Progress Schedule Check List 239
16.9 Corrective Action 240
16.10 Workshop 14 - Updating the Schedule and Baseline Comparison 241

17 CREATING RESOURCES AND COSTS 247
17.1 Creating Resources in the Resource Sheet 248
17.2 Grouping Resources in the Resource Sheet 249
17.3 Resource Information Form 250
17.3.1 General Tab 250
17.3.2 Costs Tab 251
17.3.3 Notes 251
17.3.4 Custom Fields 251

This publication is only sold as a bound book, no parts may be reproduced by any means, e.g. electronic, video or print.

24.6.4 Manually Scheduled Relationships 362
24.6.5 Schedule From Project Finish Date 362
24.6.6 Move Project 363
## 24.7 Custom Outline Codes and WBS 364

- **24.7.1 Custom Outline Codes** 364
- **24.7.2 Define a Custom Outline Code** 364
- **24.7.3 Outline Codes** 368
- **24.7.4 User Defined WBS Function** 368

### 24.8 Sharing Resources with Other Projects 370

### 24.9 Tracking Progress 371

#### 24.9.1 Setting an Interim Baseline 371
#### 24.9.2 Resetting the Baseline Using “Roll Up Baselines” 372
#### 24.9.3 Status Date Calculation Options - New Tasks 375
#### 24.9.4 Status Date Calculation Options - When Updating a Schedule 377
#### 24.9.5 Stop and Resume Dates 377
#### 24.9.6 Marking Up Summary Tasks 378
#### 24.9.7 Moving Tasks Using Task, Tasks group Move 379
#### 24.9.8 Progress Lines and Variance Columns 380

## 25 TOOLS AND TECHNIQUES FOR SCHEDULING 381

- **25.1 Understanding Menu Options** 381
- **25.2 Cut, Copy and Paste Row** 381
- **25.3 Cut, Copy and Paste Cell** 381
- **25.4 Copy Picture** 382
- **25.5 Fill Down** 382
- **25.6 Clear Contents** 383
- **25.7 Find and Replace** 383
- **25.8 Go To** 383
- **25.9 Insert Recurring Task** 383
- **25.10 Copy or Cut-and-Paste to and from Spreadsheets** 384
- **25.11 Paste Link – Cell Values in Columns** 384
- **25.12 Unique Task, Resource and Assignment ID** 384
  - **25.12.1 Task Unique ID** 384
  - **25.12.2 Resource Unique ID** 385
  - **25.12.3 Resource Assignment Unique ID** 385
- **25.13 Organizer** 385
- **25.14 File Types** 386
- **25.15 Recording a Macro** 387

## 26 APPENDIX 1 – SCREENS USED TO CREATE VIEWS 389

## 27 INDEX 401
8  FORMATTING THE DISPLAY

This chapter covers the following topics, which are used to format the on-screen display which are also reflected in print preview and printouts:

<table>
<thead>
<tr>
<th>Topic</th>
<th>Menu Command</th>
</tr>
</thead>
</table>
| Inserting Columns              | Highlight a column and strike the **Ins Key**, or  
|                                | Select **Format, Columns** group, **Insert Column**, or  
|                                | Right-click and select **Insert Column**. |
| Deleting Columns               | Highlight a column and strike the **Delete** key, or  
|                                | Select **Format, Columns** group, **Column Settings**, **Hide Column**, or  
|                                | Right-click and select **Hide Column**. |
| Adjusting the Width and Moving Columns | Grab the right header border line with the mouse and drag or resize.  
|                                | Double click on the right hand edge of the column header to optimize the header size. |
| Table – formatting the columns of data | **View, Data** group, **Tables**, **More tables...** or  
|                                | Select a column and right-click to insert, or  
|                                | Right-click on a column header and select **Field Settings**. |
| Formatting One Column          | Right-click on the column title and select **Field Settings**. |
| Format Bars                    | Open the **Bar Styles** form by left clicking in the Gantt Chart, or  
|                                | **Format, Bar Styles** group, or  
|                                | **Format, Gantt Chart Styles** group, or  
|                                | The **Gantt Chart Wizard**. This should only be used with projects created with Microsoft Project 2010 and earlier. |
| Formatting Time Units          | Select **File, Options, Advanced**, **Default options for this project**: |
| Row Height                     | Drag one or more selected rows with the mouse, or  
|                                | Edit the Table, or  
|                                | **Wrap Text** command found on the **Format, Columns** group, **Column Settings**, **Wrap Text** which automatically adjusts the row height to fit the text into the available column width. Ensure you select the column when turning on or off this function. |
| Timescale                      | **Zoom Slider** at the bottom right-hand side of the screen, or  
|                                | Double-click on the timescale opening the **Timescale** form, or  
|                                | Use the **Zoom** buttons. |
| Gridlines                      | **Format, Format** group, **Gridlines**, **Gridlines...** |
| Relationship Lines             | **Format, Format** group, **Layout** |
| Format Text Font               | Select the text to be formatted and right-click. |

The formatting is applied to the current **View** only and is automatically saved as part of the View when another View is selected. Views are covered in more detail in the **VIEWS AND DETAILS** chapter.
8.1 Formatting the Columns

Microsoft Project has some column formatting functions which are intended to make it simple to add and format new columns. There are two methods of formatting the columns:

- Inserting, editing and deleting columns of data using the **Column Definition** form.
- **Tables** – A table may be created or an existing table edited with required columns using the **Table Definition** form. You may set up the data columns in the way you want to see the information on the screen and in printouts. Therefore **Tables** may be created, edited and deleted and you may select which one is used to display the data with each View. A Table may be assigned to multiple Views.

As time progresses with the option **File, Options, Advanced, Automatically add new views, tables, filters, and groups to the global** activated, a project that is created from the **Blank Project** will have many Views, Tables and Filters from old projects that may be irrelevant to the current project and it is suggested this be turned off.

8.1.1 Understanding Custom Fields

A Custom Field is a task or resource field that may be renamed and user defined data entered in columns. These fields are preformatted only to accept specific data such as dates, costs, durations or text. These are covered in more detail in the **TABLE AND GROUPING TASKS** chapter.

8.1.2 Column Names

Some of the Microsoft Project column names are confusing or difficult to find and the table below identifies some of the more common names and what they are to enable you to find columns more quickly:

<table>
<thead>
<tr>
<th>Microsoft Project Field Name</th>
<th>Common Name</th>
<th>Location</th>
</tr>
</thead>
<tbody>
<tr>
<td>Name</td>
<td>Task Name</td>
<td>Gantt Chart</td>
</tr>
<tr>
<td>Task Calendar</td>
<td>Calendar</td>
<td>Gantt Chart</td>
</tr>
<tr>
<td>Task Start</td>
<td>Start</td>
<td>Bars form</td>
</tr>
<tr>
<td>Task Finish</td>
<td>Finish</td>
<td>Bars form</td>
</tr>
</tbody>
</table>

8.1.3 Inserting Columns

Insert a column by clicking on the column title where you require the new column. This will highlight the column. To insert a new column:

- Select **Format, Columns** group, **Insert, Column...**, or
- Hit the **Ins** Key, or
- Right-click and select **Insert Column...**.

Then select the column from the drop-down list. –

- You may immediately start typing, which will take you to the appropriate position in the list.
- In Microsoft Project 2013 and 2016, when a column name that does not exist is typed into the header, then an existing Text column will be renamed with the new title. Therefore the inserted column is a renamed text **Custom Field**.
8.1.4 Format Columns Group

The **Format, Columns** group has the following functions:

- **Align Text** – Aligns the text to the left, center or right,
- **Wrap Text** – Wrap Text and increases the row height so all text is visible,
- **Column Settings** has:
  - **Hide Column** which hides a column but does not delete the data.
  - **Field Settings** that opens the Field Settings form:
    - **NOTE**: The picture displays Text2 Custom Field that has been renamed Contractor.
  - **Data Type** which allows the data type of a Custom Field to be changed.
  - **Display Add New Column** is a function that was new to Microsoft Project 2010. A column may be permanently displayed on the right-hand side of the screen titled Add New Column and clicking on this column will open up a drop-down box for the selection of the data type. This option will display or hide this column.
  - **Insert Column** inserts a new column.
- **Custom Fields** opens the Custom Fields form covered in the TABLE AND GROUPING TASKS chapter.

8.1.5 Hiding Columns

Hiding a column does not delete the data as in Excel; the software is just not reading the data from the database. Hiding a column may be achieved by highlighting the column or by clicking on the title and then:

- **Select Column Settings**, **Hide Column**,
- **Hit the Delete key**, or
- **Right-click and select Hide Column**.

1. There will be no confirmation of hiding a column, but you are allowed to undo the hiding.
2. The term “hide” means the column is removed from the Table in this project but the data is not deleted as in Excel when a column is deleted.
8.1.6 Adjusting the Width of Columns

You may adjust the width of the column either manually or automatically.

- For manual adjustment, move the mouse pointer to the right vertical line of the column in the header. A ↔ mouse arrow will then appear and enable the column to be adjusted.

<table>
<thead>
<tr>
<th>Task Name</th>
<th>Duration</th>
<th>Start</th>
<th>Finish</th>
</tr>
</thead>
<tbody>
<tr>
<td>Task 1</td>
<td>3 days</td>
<td>01 Jan</td>
<td>03 Jan</td>
</tr>
<tr>
<td>Task 2</td>
<td>2 days</td>
<td>06 Jan</td>
<td>07 Jan</td>
</tr>
</tbody>
</table>

- For automatic adjustment, once again position the mouse pointer to the right vertical line of the column in the header and double left-click the mouse. The column width will automatically adjust to the best fit.

8.1.7 Moving Columns

Columns in a Table may be moved by clicking on the column header. The mouse pointer will change to a and the column may be dragged to a new location.

8.1.8 Formatting Columns Using the Table Function

- Select View, Data group, Tables, and select from the list of predefined Tables listed on the menu. Select the table you want to display:
• Select View, Data group, Tables, More Tables... to open the More Tables form:

- To create a new Table.
- To edit the highlighted Table.
- To copy the highlighted Table.
- Opens the Organizer form which enables you to copy a Table from one opened project to another or to the Global Project.
- Applies the selected Table making it visible on the screen.

• When you select New, Edit or Copy you will be presented with the Table Definition form:

- Click on the Show in menu box to display the Table in the View, Data group, Tables menu.
- The columns of data will be displayed on screen from left to right in the same order as the rows in the form.
- Highlight a row and then you may use the Cut Row, Copy Row, Paste Row, or Delete Row buttons.
- The data to be displayed may be selected from the drop-down box in the Field Name column.
- Align Data and Width are used for formatting the data in the columns.
- The Microsoft Project Field Name may be replaced by typing your own title in the Title box.
- The Date format: drop-down box is used to change the format for this table only.

This is a very useful function to ensure that other users of the project file see the intended date format and not their system default date format.
8.2 Formatting Time Units

Select File, Options, Advanced, Display options for this project:

- The Display options for this project: always specifies the time units, for example day, dy or d.
- Uncheck the Add space before label check box to remove a space between the value and label in date columns which allows a narrower Duration column to be displayed.

To make the Duration column width narrow, Days: should be set to d and the Add space before label unchecked. The column header could also be edited to Dur to ensure the header is also narrow. This will provide more space for other data:

- Duration
- Dur

or

- 5 days
- 5d

Applying a Table to a View will permanently change the View unless the file is not saved. The Gantt Chart View has the Entry Table assigned by default.
8.3 Formatting the Bars

Microsoft Project has several options for bar formatting:

- All the bars may be formatted to suit user definable parameters, or
- Individual bars may be formatted.

This section will cover the formatting of all bars and the next section will cover formatting individual bars.

Most formatting only affects the current View.

All bars in the Gantt Chart may be formatted to suit your requirements for display by:

- Opening the Bar Styles form by double-clicking anywhere in the Gantt Chart area, or
- Format, Bar Styles group, or
- Format, Gantt Chart Styles group, or
- The Gantt Chart Wizard, which is a simple way to format bars.

As in Microsoft Project 2010, many of the formatting menu options in Microsoft Project 2013, 2016 and 2019 are designed for a schedule created from a Microsoft Project 2013 or 2016 or 2019 template. Some formatting menu options will not operate as expected if you have opened a project created in an earlier version of Microsoft Project. For example, when a Microsoft Project 2007 file is opened with Microsoft Project 2013, the author found the display Baseline bar found on the Ribbon command Format, Bar styles, Baseline was incompatible with projects created in earlier versions of Microsoft Project and resulted in the Baseline bar being drawn over the Current Schedule bar. Users may have to use the manual method of formatting bars by opening the bars form or use the Gantt Chart Wizard to format bars created in earlier versions of Microsoft Project.

8.3.1 Formatting All Task Bars Using the Bar Styles Form

To format all the bars you must open the Bar Style form by:

- Double-click anywhere in the Gantt Chart area, but not on an existing bar, as this will open the Format Bar form for formatting an individual bar, or
- Select Format, Bar Styles group, Format, Bar Styles, the picture below displays the default Bar Styles when Microsoft Project is loaded:

The picture above shows a typical default Microsoft Project Bar Styles setting from a default load of Microsoft project.
The following notes are the main points for using this function. Detailed information is available in the Help facility by searching for “Bar styles dialog box.”

- Each bar listed in the table will be displayed on the bar chart.
- Bars may be deleted with the `Cut Row` button, pasted using the `Paste Row` button and new bars inserted using the `Insert Row` button.
- The `Name` is the title you may assign to the bar and is displayed in the printout legend. To hide the bar on the legend precede the `Name` with an *`. There are many bars with an * by them as default, as displayed in the picture above.
- The appearance of each bar is edited in the lower half of the form. The bar’s start point, middle and end points may have their color, shape, pattern, etc. formatted.
- When a new Milestone is created, the `From` and `To` must both be set to `Task Finish`.
- `Show For ... Tasks` allows you to select which tasks are displayed, similar to a filter. More than one task type may be displayed by separating each type with a “,”. Bar types not required are prefixed with “Not.” For example, the `Normal,Rolled Up,Split,Not Summary` bar would not display a bar for a summary task. Should you leave this cell blank then all task types will be displayed in this format.

The bars may be placed on one of four rows numbered from 1 to 4, top to bottom. If multiple bars are placed on the same row then the bar at the top of the list will be drawn first and the ones lower down the list will be drawn over the top, thus potentially hiding the ones below in the list.

- `From` and `To` allow you to establish where the bars start and finish. The picture below shows how to format `Total Float`, `Free Float` and `Negative Float`. Unlike some other planning and scheduling software, the `Negative Float` is drawn from the Start Date of a task and not the Finish Date and therefore a separate bar is required for Negative and Positive Float.

By default Microsoft project only displays the `Free Float Bar` with the `Format, Bar Styles` group, `Slack` button not the `Total Float` bar that would normally be expected.

Also the Negative Float bar is not automatically displayed by any Microsoft Project function, nor is it included in any View. These are two of the most important bars to show when a project finish date has been set using a constraint and these bars must always be manually created. There are some options to resolve this:

- You may wish to consider recording a macro to create these bars and this can be run when a negative float bar is required. Recording a macro is covered in para 25.15.
The author has found that these bars produce a better presentation and do not interfere with the drawing of relationships when created at the bottom of the list in the Bar Styles form.

You may download an Eastwood Harris Microsoft Project 2013 and 2016 template project from the Eastwood Harris web site at www.eh.com.au SOFTWARE AND DOWNLOADS page. This has an inbuilt View which displays both the Total and Negative Float bars. Also other issues with Microsoft Project 2013, 2016 and 2019 have been resolved and are covered in the template description.

The Text tab allows you to place text inside or around the bar:

It is not possible to format the font in the Bar Styles form. Select Format, Format group Text Styles to open the Text Styles form and select the bar text font.

To show Critical and Non-critical tasks, the bars should be formatted as shown below, with particular attention paid to the Show For… Tasks column. Non-critical Tasks are formatted as Normal, Non-critical and Critical Tasks as Normal, Critical.

<table>
<thead>
<tr>
<th>Name</th>
<th>Appearance</th>
<th>Show For… Tasks</th>
<th>Row</th>
<th>From</th>
<th>To</th>
</tr>
</thead>
<tbody>
<tr>
<td>Task</td>
<td>Normal, Noncritical, Active, Not Manually Set</td>
<td></td>
<td>Task Start</td>
<td>Task Finish</td>
<td></td>
</tr>
<tr>
<td>Critical</td>
<td>Normal, Critical, Active, Not Placeholder</td>
<td></td>
<td>Task Start</td>
<td>Task Finish</td>
<td></td>
</tr>
</tbody>
</table>

8.3.2 Format Bar Styles Group Menu

Select the Format, Bar Styles group to view this group of commands:

- Format has two options:
  - Bar opens the Bars form which is used to format of one or more selected bars and is self-explanatory. The formatting here overrides all formatting set in the Bars form and is removed by the Reset button.
  - Bar Styles opens the Bar Styles form as discussed above to format all bars.

- The other buttons in the Format, Bar Styles groups will hide or display the bars as indicated, but these may not give the expected results with a project created in an earlier version of Microsoft Project.
  - Critical Tasks shades the Critical Tasks red.
  - Slack displays the Free Float and NOT Total Float bar which were displayed in earlier versions on Microsoft Project when the Gant Chart wizard was run.
  - Late Tasks displays tasks that are late compared to the Status Date.
  - Baseline displays the Baseline bar.
  - Slippage displays how much time the task is behind the Baseline.
  - Task Path allow the highlighting of Predecessors, Critical Predecessors, Successors and Critical Successors.
Many of the formatting menu options are designed for a schedule created from a Microsoft Project 2013 template. Some menu options will not operate as expected if you have opened a project created in an earlier version of Microsoft Project. For example, the author found the baseline bar was placed on top of the current schedule bar using the Ribbon commands. Users may have to use the manual method of formatting bars by opening the bars form or using the Gantt Chart Wizard.

8.3.3 Gantt Chart Styles Group Menu
Select Format, Gantt Chart Styles group to see the option for coloring bars. This function was new to Microsoft Project 2010.

The button at the bottom right-hand side opens the Bar Styles form.

8.3.4 Formatting Bars Using the Gantt Chart Wizard
The Gantt Chart Wizard is a popular function for people who used earlier versions of Microsoft Project. The wizard will overwrite any formatting you may have created. This is a straightforward method of formatting your bars and often this is the best method of formatting bars. It is very simple to use but will not display the Negative Float and Free Float bars. These will have to be added manually using the Bar Style form as described in the Bar Styles form section.

If the Gantt Chart Wizard button is not on your Microsoft Project default toolbars then this may be added to either the Quick Access Toolbar or the Ribbon.

The author found that projects formatted with the Gantt Chart Wizard and projects created in earlier versions of Microsoft Project will have formatting that is incompatible with the Microsoft Project 2013, 2016 and 2019 Format, Bar Styles group buttons. The use of the Baseline button resulted in the Baseline bar covering the current schedule bar so only the Baseline bar was visible. To resolve this issue, users should either use only Gantt Chart Wizard or only the new Microsoft Project 2013, 2016 and 2019 Format, Bar Styles group buttons, but not both. This issue may be rectified with software updates.

8.3.5 Placing Dates and Names on Bars
To place a name and or dates on the Task bars and Milestones create two bars at the bottom if the list in the bars form as per the picture below which neither displays a bar:

<table>
<thead>
<tr>
<th>Task Name on Bar</th>
<th>Appearance</th>
<th>Show For: Tasks</th>
<th>Row</th>
<th>From</th>
<th>To</th>
</tr>
</thead>
<tbody>
<tr>
<td>Task Name on Milestone</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

No Bar is displayed

From and To must be Task Finish for the Milestone
8.4 Row Height

8.4.1 Setting Row Heights
Row heights may be adjusted to display text that would otherwise be truncated by a narrow column.

Row heights are adjusted by whole lines and not points as in Excel.

The row height may be set in the Table Definition form by selecting View, Data group Tables, More Tables.... From this view select the table in which you wish to edit the row height in and click on the Edit... button. Once the Table Definition form is open select the row height from the drop-down box next to Row height:

The row height of one or more columns may also be adjusted in a similar way to adjusting row heights in Excel, by clicking on the row and dragging with the mouse:

- Highlight one or more rows that need adjusting by dragging or Ctrl-clicking.
- If all the rows are to be adjusted, then click on the Select All button above row number 1, to highlight all the tasks.
- Then move the mouse pointer to the left-hand side of a horizontal row divider line. The pointer will change to a double-headed arrow. Click and hold with the left mouse button and drag the row or rows to the required height.

8.4.2 Wrap Text Command
Microsoft Project 2010 has introduced a Wrap Text command found on the Format, Columns group, Column Settings, Wrap Text which automatically adjusts the row height to fit the text into the available column width.

Ensure you select the column when turning on or off this function and when it is not highlighted it is turned off.

Wrap Text may also be turned on or off for any column using the Table Definition form.
8.5 Format Fonts

There are two basic options for formatting fonts:

- Either individual cells may be selected by Ctrl-clicking or dragging with the mouse and formatted, or
- The fonts of tasks that meet pre-set criteria, such critical tasks may be formatted using the text Styles command.

8.5.1 Format Individual Cells Font Command

The Format, Font... function from Microsoft 2007 and earlier has been replaced with a right-click option and allows you to format any selected text in selected cells, rows or columns:

- Select the text to be formatted,
- Right-click and two toolbars are opened. The upper toolbar in the picture below has four buttons that may be used for formatting individual cells:

<table>
<thead>
<tr>
<th>Task Name</th>
<th>Duration</th>
</tr>
</thead>
<tbody>
<tr>
<td>Bid</td>
<td>11</td>
</tr>
<tr>
<td>Tech</td>
<td></td>
</tr>
<tr>
<td>Approval</td>
<td>0d</td>
</tr>
<tr>
<td>Requirements</td>
<td>4d</td>
</tr>
<tr>
<td>Contract</td>
<td>5d</td>
</tr>
</tbody>
</table>

8.5.2 Format Text Styles

The Format, Format group, Text Styles command opens the Text Styles form and allows you to select a text type from the Item to Change: drop-down box and apply formatting to the selected item:

Text may be formatted by using any of the styles listed below:

- **All**: This is all text including columns and rows,
- **Non-critical**, **Critical**, **Milestone**, **Summary**, **Project Summary**, **Marked**, **Highlighted** and **External tasks**,
- **Row** and **Column** titles,
- **Top**, **Middle** and **Bottom** Timescale Tiers, and
- **Bar Text** left, right, below, above and inside.
8.6 Format Timescale

8.6.1 Zoom Slider
The Zoom Slider was introduced with Microsoft Project 2010 and replaced the View, Zoom... function. This may be found at the bottom right-hand side of the screen and provides a simple way of scaling the time scale in the Gantt Chart and all other time scaled views such as the Calendar, Usage and Network Diagram View.

This function works differently than other scheduling software in that it changes the scale and the displayed time units at the same time and may result in some undesirable time units being displayed.

Once this function is used, your original timescale date formatting will be lost and may only be recovered with undo as this function applies its own formatting such as date formats.

The author has found that more predictable results are achieved by using the traditional Zoom In and Zoom Out functions which may be added to the Quick Access Toolbar.

8.6.2 Ribbon Menu
There are some new commands available with Microsoft Project 2010 on the Ribbon:

- The Timescale: option is a quick method of selecting the Minor Timescale, the lower line in the Timescale,
- Zoom opens a self-explanatory menu,
- Entire Project zooms the timescale to fit the whole project Gantt Chart to fit in the available space,
- Selected Tasks zooms the timescale to fit the bars of selected tasks to fit in the available space,
8.6.3 Format Timescale Command

The Timescale form provides a number of options for timescale display, which is located above the Bar Chart, and the shading of Nonworking time.

To open the Timescale form:

- Double-click on the timescale, or
- Add the Timescale button to the Ribbon or Quick Access Toolbar.

There are many options here which are intuitive and will not be described in detail.

**Top Tier, Middle Tier and Bottom Tier Tab**

- These three timescales may have different scales. These are often set at “weeks and days” or “months and weeks.” By default, the Top Tier timescale has been disabled. You may enable the three tiers together by selecting Three Tiers (Top, Middle, Bottom) from the Timescale options, Show:
- The Label will affect how much space the timescale will occupy, so the selection of a long label will result in longer Task bars.
- Tick lines and Scale separator hide and display the lines between the text.
- Size: controls the horizontal scale of the timescale and in association with the Label: are the two main tools for scaling the horizontal axis in the Gantt Chart.
- Choose the Use fiscal year function to display the financial year and then select the File, Options, Calendar tab to choose the month in which the fiscal year starts.
- Should you wish to number the time periods, for example; Week 1, Week 2, etc., there are a number of sequential numbering options available at the bottom of the label list.
Nonworking Time Tab

The Nonworking time tab allows you to format how the nonworking time is displayed. You may select only one calendar. The nonworking time may be presented as shading behind the bars, in front of the bars or hidden.

By default this is set to the Standard Calendar for each view and does not change when the Project Default Calendar is changed.

Therefore if you change the Project Base calendar in the Project Information and you wish to see this new calendar in all views you will have to edit all the views.
8.6.4 Format Timescale Font
To format the Timescale font, the Format, Format group, Text Styles command opens the Text Styles form:

The timescale fonts may be formatted separately by selecting the appropriate line item under Item to Change:

A very tight timescale may be achieved by making the Bottom Timescale Tier a small font as displayed in the picture.

8.7 Format Gridlines
Gridlines are important to help divide the visual presentation of the Bar Chart. This example shows Middle Tier Gridlines every week and Bottom Tier Gridlines every day.

To format the Gridline select Format, Format group, Gridlines, Gridlines… or Right click in the Gant Chart and select Gridlines to open the Gridlines form:

- Select the gridline from the drop-down box under Line to change:
- Select color and type from under Normal.
- Some gridlines may be set to occur at intervals using the At interval option. Thus if you only want a line every 4th row then under the Normal heading set the Grid Line as a blank and set the At Interval line to 4 and set the Type and Color as required.
Some of the titles for the gridlines are not intuitive, so some interpretation is given below:

- For Data Column and Row dividing lines, use **Sheet Rows** and **Sheet Columns**.
- For Timescale and Column Titles, use **Horizontal** and **Title Vertical**.
- Gantt Chart area, including lines for **Project Start** and **Finish Date**, **Current** and **Status Date**, are clearly described.
- **Page Breaks** will only display manually-inserted breaks. You may need to add the Insert Page Break button on the Quick Access Toolbar.

The earlier Microsoft Project option Manual page breaks check box in the Print form, which allowed printing and ignoring manual page breaks, has been removed from Microsoft Project 2013.

Microsoft Project has two dates that may be used to identify the **Data Date**, the date that the data has been collected for updating a project schedule. These two dates are the **Status Date** and **Current Date** which are set in the Project Information form:

- When a new project is created using the Global.mpt Microsoft Project displays the **Current Date** as a dark dotted vertical line but the **Current Date** is reset to the computer’s system date each time the project file is opened. It is suggested that this line be removed using the Gridline form and the **Current Date** is not used to identify the date the schedule is being update on because the software changes it every time the schedule is opened.
- The **Status Date** never changes once set and therefore it is suggested that this line should be displayed as per the picture above and use to identify the date at which the schedule is being updated on.

Many laser printers will not print light gray lines clearly, so it is often better to use dark gray or black Sight Lines for better output.

### 8.8 Format Colors

Colors are formatted in a number of forms and there is no single form for formatting all colors:

- **Nonworking time** colors in the Gantt Chart are formatted in the Timescale form, double-click on the timescale.
- **Text** colors are formatted in the Text Styles and Font forms, found in the Format, Format groups, Text Style.
- **Gridline** colors are formatted in the Gridlines form, also found under the Format, Format group, Gridlines.
- **Hyperlink** colors are formatted under File, Options, Advanced, Display options for this project:
- **Timescale** colors are with the File, Options, General tab, User Interface Options, Color scheme: option.
- The **Logic Lines**, also known as **Dependencies**, **Relationships**, or **Links**, inherit their color from the predecessor’s bar color in the Gantt Chart view and may be formatted in the Network Diagram view by selecting Format, Format group, Layout.
8.9 Format Links, Dependencies, Relationships, or Logic Lines

The Links, also known as Dependencies, Relationships, or Logic Lines, may be displayed or hidden by using the Layout form.

- Select **Format, Format group, Layout** to open the Layout form and click on one of the three radio buttons under **Links** to select the style you require:

The color of the **Link** is inherited from the color of the predecessor task.

- To display Critical Path on the relationship lines you will need to format the bars with a different color. This is often set to red.

The color of the successors’ relationship lines is adopted from the task bar color. Therefore, re-formatting critical bars with the **Format Bar** form will also re-format the color of the successors’ relationship lines and they may no longer display the Critical Path color on the Logic Lines. This will effectively mask the Critical Path and could provide misleading results.

The highest bar in the Bars form dictates the color of the relationship line and may not be the same as the color displayed in the Gantt Chart View.

Oracle Primavera products format the relationship separately from the bars and are able to identify the Critical, Driving and Non-Driving relationships, which is not possible with Microsoft Project.

- **Always roll up to Gantt bars** will summarize subtasks using the **Bars Styles for Rolled Up Task** formatting:

- **Round bars to whole days** adds visibility to short duration tasks.
- **Show bar splits** should be left checked to show tasks that have been split.
- **Show drawings** allows the hiding of any graphics inserted on the Gantt Chart.
8.10 Workshop 6 - Formatting the Bar Chart

Background

Management has received your draft report and requests some changes to the presentation.

If you are using the Eastwood Harris template then most of the formatting requirements you need to make are made in the template in the Gant Chart Inc Total Float and Neg Float view. The following attributes have been changed from the standard settings:

- **File, Options, Schedule and Advanced** have been edited in line with the Author's recommendations in his book.
- Two new Views titled Gantt Chart Inc Negative and Total Float and Gantt Chart Name on Bars
- **Columns**: Total Float added and Resources removed from the Gant Chart Inc Total Float and Neg Float view.
- **Grid lines**: Middle and Bottom Timescale Tiers, Project Start, Project Finish and Status Date displayed and Current Date removed.
- **Bars**:
  - Total Float (Total Slack) and Negative Float added and all text removed from all bars.
  - Bar display in the Legend: Many bars have been hidden in the Legend (but not deleted) by placing an "***" at the front of the Bar description in the Bars form.
- **Printing**: some project information is drawn from the Advanced Properties form. Also all project data has been removed from the Legend so the Legend may be hidden if not required, thus leaving all project data displayed if the Legend is hidden.
- A Custom Field has been added to the Tracking Table titled Status Check that indicates when activities have been updated correctly. NOTE: You must set the "Status Date" in the "Project Information" form for this field to calculate correctly.
Assignment

Format your schedule as follows:

1. Select Task, Views, Gantt Chart, Custom and select Gantt Chart Inc Total Float and Neg Float to apply this view.

![Select Task, Views, Gantt Chart, Custom and select Gantt Chart Inc Total Float and Neg Float to apply this view](image1)

The View Name is displayed on the left hand side of the screen.

You may also right click in the vertical bar on the left hand side of the screen to select

2. Then apply the Gantt Chart Name on Bars view and then the Gantt Chart.

3. Your answer should be as per the pictures below:

   ![Sample book with two chapters](image2)

### Task Name | Due | Start | Finish | Total Slack
--- | --- | --- | --- | ---
1 | Bid for Facility Extension | 8d | 6 Dec '21 | 15 Dec '21 | 0d
2 | Technical Specification | 5d | 6 Dec '21 | 10 Dec '21 | 0d
3 | Approval to Bid | 0d | 6 Dec '21 | 6 Dec '21 | 0d
4 | Determine Installation Requirements | 4d | 6 Dec '21 | 9 Dec '21 | 0d
5 | Create Technical Specification | 5d | 10 Dec '21 | 7 Jan '22 | 0d
6 | Identify Supplier Components | 2d | 7 Jan '22 | 7 Jan '22 | 0d
7 | Validate Technical Specification | 2d | 7 Jan '22 | 7 Jan '22 | 0d
8 | Delivery Plan | 8d | 6 Dec '21 | 15 Dec '21 | 0d
9 | Document Delivery Methodology | 4d | 6 Dec '21 | 9 Dec '21 | 0d
10 | Obtain Quotes from Suppliers | 8d | 9 Dec '21 | 15 Dec '21 | 0d
11 | Calculate the Bid Estimate | 3d | 6 Dec '21 | 8 Dec '21 | 0d
12 | Create the Project Schedule | 3d | 6 Dec '21 | 8 Dec '21 | 0d
13 | Review the Delivery Plan | 3d | 8 Dec '21 | 8 Dec '21 | 0d
14 | Bid Document | 6d | 12 Dec '21 | 13 Dec '21 | 0d
15 | Create Draft of Bid Document | 6d | 13 Dec '21 | 13 Dec '21 | 0d
16 | Review Bid Document | 4d | 13 Dec '21 | 16 Dec '21 | 0d
17 | Finalize and Submit Bid Document | 2d | 16 Dec '21 | 16 Dec '21 | 0d
18 | Bid Document Submitted | 0d | 16 Dec '21 | 16 Dec '21 | 0d
4. Apply the Gant Chart view.
5. Ensure that the Entry Table is displayed by selecting View, Data group, Tables, Entry table.
6. Apply the Costs table,
7. Then apply the Tracking table,
8. Reapplying the Gant Chart Inc Total Float and Neg Float view.
9. Insert the Task Calendar column between Duration and Start columns in the Table Definition form by using the right click command:

10. Your answer show be as per the pictures below:

11. Add the Zoom In and Zoom Out buttons to the Quick Access Toolbar if these icons are not present on the toolbar and test their function.
12. Leave the scaling at months and weeks with Size in the Timescale form of 150%.
13. Save your OzBuild Bid project.
13 TABLES, CUSTOM FIELDS AND GROUPING TASKS

Outlining was discussed earlier as a method of organizing detail tasks under summary tasks. There are alternative data fields and functions available in Microsoft Project for recording task information, then organizing, grouping and displaying task information:

- Text Columns, Custom Fields and Grouping
- Custom Outline Codes – covered in the MORE ADVANCED SCHEDULING chapter.
- User Defined WBS (Work Breakdown Structure) – covered in the MORE ADVANCED SCHEDULING chapter.

These functions are addressed in this book but are not examined in detail. These functions enable the presentation of the tasks under other project breakdown structures outlined in PMBOK® Guide section Project Communications Management to create reports.

<table>

</tbody>
</table>

13.1 Understanding Project Breakdown Structures

The main breakdown structure of a project is the WBS which is usually represented with Outlining. Some organizations have highly organized and disciplined structures with "rules" for creating and coding the elements of the structure.

Other Project Breakdown Structures are required to represent the breakdown of a project into other logical functional elements. Some clients also impose a WBS code on a contractor for reporting and/or claiming payments. The following list shows examples of such structures:

- **WBS**  Work Breakdown Structure, breaking down the project into the elements of work required to complete a project.
- **PBS**  Product Breakdown Structure, used in the PRINCE2™ Project Management Methodology.
- **OBS**  Organization Breakdown Structure, showing the hierarchical management structure of a project.
- **CBS**  Contract Breakdown Structure, showing the breakdown of contracts.
- **SBS**  System Breakdown Structure, showing the elements of a complex system.
We will discuss the Text Columns, Custom Fields and Grouping functions available in Microsoft Project to represent these structures in your schedule.

13.2 Tables

A table selects and formats the columns of data to be displayed in a View. The formatting of tables is covered in the FORMATTING THE DISPLAY chapter.

- A Table may be applied to one or more Views which display data in tables. This includes Views such as the Gantt Chart, Resource Sheet, Resource Usage, Task Sheet and Task Usage.
- There are two types of Tables:
  - Task tables that are applied to Task Views and
  - Resource tables that are applied to Resource Views.
- When the View is active and you assign it a different Table, the View is permanently changed and the Table permanently associated with the View; unless a project is not saved. Unlike Oracle Primavera software, the user does not have the option to save or not save changes to a view when another is selected.

Formatting a Table by adding or removing columns, etc., is editing the current table on a permanent basis. These changes will appear when the table is next applied and this will affect any View the table is associated with. It is therefore strongly recommended that each View be paired with a unique table of the same name. Consider carefully when adding or deleting columns from a table as the changes are permanent, unless you do not save your file.
13.2.1 Applying a Table to a View
A Table may be applied to the active View by:

- Clicking the Select All button, the box above the row 1 number, then right-clicking the mouse to display a sub-menu with the table options, or
- Selecting View, Data group Tables and selecting a Table from the list in the menu.

Both of these Table menus have a More Tables... option which will open the More Tables... form:

- Tables that have not been selected to appear on the menu list will be displayed here.
- Select a table from the list and click on Apply.

13.2.2 Creating and Editing a Table
A Table may be created or edited by opening the View, Data group Tables, More Tables... form:

- New... creates a new table,
- Edit... edits an existing table, or
- Copy... creates a copy of an existing selected table.
- Apply – applies the table to a view.

All these buttons open the Table Definition form shown below:
The functions in this form are similar to those in many other forms. The functions that are unique to this form are listed below:

- **Show in menu** – Decides if the Table is displayed in menus.
- **Date format**: – Changes the format of the dates in this project and table only.
- **Row height**: – Allows you to specify the row height for this table.
- **Lock first column** – Ensures the first column is always displayed when scrolling to the right.
- **Auto-adjust header row heights** – Automatically adjusts the header height when the width of the column is adjusted so the column text wraps.
- **Show ‘Add New Column’ interface** shows the New Column column at the right of all columns. Clicking on this column creates a new column.

The **Date Format** selected in the File, Options, General tab is overridden by a date format selected in a Table. Therefore, if you have a project that requires a unique date format then the option of selecting a date format in a Table overrides the default on any computer for anyone who opens the project file.
13.3 Custom Fields

A Custom Field is an existing Microsoft Project field that may be:

- Renamed to suit your projects requirements,
- Tailored to display specific data in a specific format,
- Assigned a list, such as a list of values or people, that may be assigned from a drop-down list, or
- Assigned a formula for calculating data from other fields.

To create or edit a Custom Field the Custom Fields form must be opened by:

- Displaying the Custom Fields button Ribbon or Quick Access Toolbar, or
- Selecting Custom Fields when inserting a new column, or
- Selecting Custom Fields when right-clicking on an existing column.

Task fields may be used for:

- Recording additional information about Tasks (such as responsibility, location, floor, system)
- Recording additional information about Resources such as telephone number, address and skills.
- Formulas may be created to populate the fields with calculated data.
- Tasks or resources may be grouped using these fields.

These predefined fields fall into the following categories:

- Cost
- Date
- Duration
- Finish (date)
- Flag
- Number
- Start (date)
- Text
- Outline Code

Both the title and content of these fields may be edited with options including:

- **Rename...** allows the renaming of the field name.
  - This new name is then available when inserting columns and is displayed in the column header.
  - After Custom Field is renamed, the new name will be displayed in the Custom Fields tab of the Task or Resource Information form and the appropriate information may then be entered in this form.
- **Import Field...** allows importing from other fields or project files.
• **Custom Attributes:**
  - **None** allows data to be entered into the field without any restrictions, this is similar to the way a User Defined Field works in Primavera P6.
  - **Lookup...** opens the **Edit Lookup Table** where a table of values and descriptions may be entered. The Value is displayed in columns and Description in bands when the tasks are grouped by this field. These values may be copied and pasted from other applications such as Excel. This is similar to the way an Activity Code works in Primavera P6 and odes in Asta Powerproject.
  - **Formula...** allows the assigning of formulae for the calculation of field value from other task and project fields.

• **Calculation for task and group summary rows** specifies how Summary tasks calculate their value, such as Maximum, Minimum, Sum, None and Average. For example, the following options may be used:
  - A Start Date would select Minimum,
  - A Finish Date would select Maximum,
  - Cost would use Sum.

• **Calculation for assignment rows** determines if the field value is displayed only against the resource in Task Usage and Resource Usage fields or against the resource and assignment.

<table>
<thead>
<tr>
<th>Resource Only</th>
<th>Resource and Assignment</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td></td>
</tr>
<tr>
<td>Resource Name</td>
<td>Wot</td>
</tr>
<tr>
<td>1 Paul Harris</td>
<td>16 hrs</td>
</tr>
<tr>
<td>Electrical Design</td>
<td>8 hrs</td>
</tr>
<tr>
<td>Mechanical Design</td>
<td>8 hrs</td>
</tr>
<tr>
<td>2 Samantha Harris</td>
<td>10 hrs</td>
</tr>
<tr>
<td>Electrical Design</td>
<td>8 hrs</td>
</tr>
<tr>
<td>Mechanical Design</td>
<td>8 hrs</td>
</tr>
</tbody>
</table>

• **Value to display** allows the options of displaying the value in the cell or generating graphical indicators such as traffic lights. A very simple example is displayed below when the Number 1 Custom Field has been renamed Risk and three values entered and three different images displayed:
Outline Codes will be covered in more detail later in paragraph 24.7.1.

Oracle Primavera P3 and SureTrak software users will find the formatting options available when using Value and Description restrictive, because the description may not be displayed in columns and the value not displayed when Grouping. This is similar to the way Oracle Primavera P6 works.

13.4 Grouping

Grouping allows grouping of tasks under data items such as Customized fields, Durations, Constraints, etc. This function is particularly useful with schedules with a number of tasks and there is a requirement to work with a related group of tasks throughout a project. The picture below displays a simple project where the relationship between each Task is difficult to check by inspection of the Gantt Chart organized with Outlining by Phase:

<table>
<thead>
<tr>
<th>Task Name</th>
<th>Text 1 - Building</th>
<th>Text 2 - System</th>
<th>System</th>
<th>Building</th>
</tr>
</thead>
<tbody>
<tr>
<td>Design System</td>
<td>2 days</td>
<td>25 Dec ’18</td>
<td>25 Dec ’18</td>
<td></td>
</tr>
<tr>
<td>Commission System</td>
<td>2 days</td>
<td>15 Jan ’19</td>
<td>21 Jan ’19</td>
<td></td>
</tr>
<tr>
<td>Install</td>
<td>4 days</td>
<td>24 Dec ’18</td>
<td>24 Dec ’18</td>
<td></td>
</tr>
<tr>
<td>Test</td>
<td>2 days</td>
<td>3 Jan ’19</td>
<td>7 Jan ’19</td>
<td></td>
</tr>
<tr>
<td>Test</td>
<td>2 days</td>
<td>3 Jan ’19</td>
<td>7 Jan ’19</td>
<td></td>
</tr>
<tr>
<td>Test</td>
<td>2 days</td>
<td>3 Jan ’19</td>
<td>7 Jan ’19</td>
<td></td>
</tr>
<tr>
<td>Test</td>
<td>2 days</td>
<td>3 Jan ’19</td>
<td>7 Jan ’19</td>
<td></td>
</tr>
<tr>
<td>Test</td>
<td>2 days</td>
<td>3 Jan ’19</td>
<td>7 Jan ’19</td>
<td></td>
</tr>
</tbody>
</table>

With the Grouping function it is possible to Group on a text field to reorganize the data. In this example, the schedule has been reorganized by the Text 1 - Building and Text 2 - System fields, which have been renamed using the "Custom Fields" form to System and Building. You may now clearly see the logic between the items.
13.4.1 Group by: Function

The View, Data group, Group by: option allows you to Group scenarios in the same way as filters are created and saved:

- **Custom** are user defined groups,
- **Built-In** are system defined groups,
- **Clear Group** removes any grouping applied to a View,
- **New Group By...** opens the Group Definition form allowing the defining and saving of a new group scenario,
- **More Groups...** opens the More Groups form allowing access to Groups that may not be listed in the View, Data group, Group by: list.

- **Maintain Hierarchy in Current Group** was a new feature to Microsoft Project 2010 and allows the user to see the Outline hierarchy when Grouping. The picture below displays the effect of grouping by two Custom Text columns, with the lower picture having this option turned on.
13.4.2 Using a Predefined Group

The Grouping function works in a similar way to Filters and Tables. A predefined Group may be assigned by:

- Selecting View, Data group, Group by:
- Then either:
  - Selecting a grouping from the list, or
  - Selecting More Groups... to open the More Groups form and then selecting one from the list after clicking on the Task or Resource radio button.

13.4.3 Creating a New Group

Create a new Group by:

- Selecting View, Data group, Group by:
- Selecting More Groups... to open the More Groups form,
- Clicking on the New... button to open the Group Definition form,
- Now create a “Grouping” which may be reapplied at a later date or copy to another project using Organizer.
The Define Group Interval form is available with many Group By options, such as Start or Finish, and allows further formatting options by defining the intervals of the banding.

Grouping is similar to the Oracle Primavera and Asta Powerproject's Group and Sort function. It is possible to mimic this Oracle Primavera function using the text columns as Task Code dictionaries. Projects converted from Oracle Primavera software format often translate Primavera Task Codes to Microsoft Project's Text fields. After conversion, the project may be Grouped by Text fields. Custom Outline Codes may produce a better result as bands may be ordered with this function.

13.4.4 Grouping Resources in the Resource Sheet
Resources may be created in the Resource Sheet. Then the resources may be grouped by a number of attributes. The standard options are shown below:

Resources are covered in more detail in the RESOURCES chapters.

There are many uses for Grouping Resources which may be used in conjunction with Customized Fields:

- A project hierarchical organizational structure may be created using these Customized Outline Codes and resources summarized under this hierarchical structure in the Resource Sheet.
- Resources details such as skill, trade, address, office, department and telephone number may be recorded in Customized Fields and the resources grouped by this data.
13.4.5 **Grouping with AutoFilter**

The **AutoFilter** command may also be used to Group tasks:

- It allows Grouping by one parameter only, and
- Different columns have different options,
- The picture below shows the Grouping options when selecting the Task Name header AutoFilter to group the tasks:

![Grouping options](image)

- The picture below shows the Grouping options when selecting the Start header AutoFilter to group the tasks:

![Grouping options](image)

- The picture below shows the option to remove grouping using the **No Group** AutoFilter command:

![Grouping options](image)
13.5 *Workshop 11 - Reorganizing the Schedule*

**Background**

We want to issue reports for comment by management. We will group the tasks by their float value and show the WBS columns. We will also look at the Outline Codes and then Group the Tasks by the people responsible for the work, which we will enter into a text column.

**Assignment**

1. Grouping – to group tasks by their float value:
   - Ensure there is no filter applied.
   - Apply the Entry table and ensure the *Total Slack* column is displayed.
   - Select *View, Data, Group By* drop down box and select *New Group by*:
   - Create a new Group titled *Total Float* and group the tasks by *Total Slack*
   - Change the font to Calibri 10 pt, Bold,
   - Select an appropriate cell background,
   - Check the *Show in menu* option, **DO NOT** show Summary tasks and apply.

### Group Definition in 'OzBuild Workshop 11'

<table>
<thead>
<tr>
<th>Name</th>
<th>Total Float</th>
<th>Show in menu</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Group By</strong></td>
<td>Total Slack</td>
<td></td>
</tr>
<tr>
<td><strong>Then By</strong></td>
<td>Task</td>
<td>Ascending</td>
</tr>
</tbody>
</table>

- Group assignments, not tasks
- Group by setting for Total Slack
  - Font: Calibri 10 pt, Bold
  - Cell background: 
  - Pattern: 

- Define Group Intervals...

- Show summary tasks:
- Maintain hierarchy

[Sample book with two chapters]
All the tasks with zero days’ float are grouped at the top under the heading **Total Slack: 0 days**.

**NOTE:** You may format or remove the summary bars or add text to them by opening the **Bars** form and editing the **Group By Summary** bar text tab.
2. Grouping by Responsibility

- Remove the previous grouping by selecting [No Group].
- Use the **Add New Column** command to add a **Text** as a new column,
- Drag this new column so it is beside the Task Name
- Right Click on the column heading, select **Custom Fields** and use the **Rename** command to rename the column as **Responsibility**.

- Assign the Responsibilities in the table below, use Copy & Paste cells:

<table>
<thead>
<tr>
<th>ID</th>
<th>Task Name</th>
<th>Responsibility</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>Technical Specification</td>
<td></td>
</tr>
<tr>
<td>3</td>
<td>Approval to Bid</td>
<td></td>
</tr>
<tr>
<td>4</td>
<td>Determine Installation Requirements</td>
<td>Scott Morrison - Engineering</td>
</tr>
<tr>
<td>5</td>
<td>Create Technical Specification</td>
<td>Scott Morrison - Engineering</td>
</tr>
<tr>
<td>6</td>
<td>Identify Supplier Components</td>
<td>Angela Lowe - Purchasing</td>
</tr>
<tr>
<td>7</td>
<td>Validate Technical Specification</td>
<td>Scott Morrison - Engineering</td>
</tr>
<tr>
<td>8</td>
<td>Delivery Plan</td>
<td></td>
</tr>
<tr>
<td>9</td>
<td>Document Delivery Methodology</td>
<td>Scott Morrison - Engineering</td>
</tr>
<tr>
<td>10</td>
<td>Obtain Quotes from Suppliers</td>
<td>Angela Lowe - Purchasing</td>
</tr>
<tr>
<td>11</td>
<td>Calculate the Bid Estimate</td>
<td>Carol Peterson - Bid Manager</td>
</tr>
<tr>
<td>12</td>
<td>Create the Project Schedule</td>
<td>Carol Peterson - Bid Manager</td>
</tr>
<tr>
<td>13</td>
<td>Review the Delivery Plan</td>
<td>Carol Peterson - Bid Manager</td>
</tr>
<tr>
<td>14</td>
<td>Bid Document</td>
<td></td>
</tr>
<tr>
<td>15</td>
<td>Create Draft of Bid Document</td>
<td>Carol Peterson - Bid Manager</td>
</tr>
<tr>
<td>16</td>
<td>Review Bid Document</td>
<td>Carol Peterson - Bid Manager</td>
</tr>
<tr>
<td>17</td>
<td>Finalize and Submit Bid Document</td>
<td>Carol Peterson - Bid Manager</td>
</tr>
<tr>
<td>18</td>
<td>Bid Document Submitted</td>
<td></td>
</tr>
</tbody>
</table>
Create a Group titled **Responsibility** by clicking the **Group by:** button and grouping the tasks by Responsibility showing in the menu but do not show Summary tasks.

Select **Apply**, 

See the answer below:

3. Remove all Grouping.
4. Hide the **Responsibility** column.
5. Save your **OzBuild Bid** project.
